firmware elmeg T484

file: T484_v753113_rc02.fwr

TAPI release v.3

file for 32-bit operating systems: LAN-TAPI-ICT-Txxx-V302beta2.exe

file for 64-bit operating systems: LAN-TAPI64-ICT-Txxx-V302beta2.exe

WIN-Tools

No changes, please use file WIN-Tools-Txxx-V751-INT_080611.exe.

List of new features, changes and bug fixing from release 7.52 to release 7.53:

No.	New functions and changes
TAPI	
01	New function: TAPI release v.3 supports 64-bit operating systems (Windows 7, Vista, Server2003, Server 2008 und Server 2008R2).
02	Further changes: TAPI functions of PBX and driver software are now more stable and the connection between PBX and PCs (monitoring) is improved. Service provider name and MSN will be displayed as well as further parameters, such as internal MSN of internal calls, callreason and connected ID. Format of numbers was enhanced and the number of clients is no longer limited. Log functions such as Live Logging and Debug View are extended now and hands-free function of system phones is optimized. Important note: This TAPI version requires compatible firmware and software drivers, which will be proved during login of TAPI.

Bug fixing	
SIP	
01	Bug fix: ARS 12345 (only T484) After the second incoming call via SIP provider to IP290, the voice application DISA was faulty. This problem is fixed.
02	Bug fix: ARS 10859, ARS 12657, ARS 12702 (only T444 and T484) Problems concerning Early Media and SIP telephony are solved.
03	Bug fix: ARS 12959 Problems concerning Call Through by PIN access authorization via external SIP connections are fixed.
04	Bug fix: ARS 13465, ARS 13461 (only T444 and T484) Incoming calls (via SIP provider to a SIP telephone) transferred with advanced notice to another SIP telephone caused call interruptions. This problem is fixed.
System	
01	Bug fix: ARS 12907 (only T484) If calls are not assigned to team 00 with announcement but for example to team 01 with announcement, the PBX blocked. This problem is solved.
02	Bug fix: ARS 11808 (only T240) Numbers of the telephone book could not be used for Call Through. This problem is solved.
TAPI	
01	Bug fix: ARS 12007 (only T240) As soon as TAPI (Estos) started, the PBX reset. This problem is solved.
02	Bug fix: ARS 12863 The corresponding LED of CS4xx correctly indicated call forwarding but Estos didn't. This problem is fixed. The new Windows TAPI driver version 3 is required.
03	Bugfix: ARS 13718 By reactivating a parked connection the PBX collapsed. This problem is fixed.
