DECT 200M Release Notes 85

1. Bug Fixes:

- Media resources could be blocked after a call had been dropped, resulting in audio drops during later calls or in reduced capacity of connected components.

- The web interface was occasionally blocked "by another client session".

- There were occasional issues with incoming and outgoing calls when no SIP INVITES were received from the DM.

4. Known Issues:

- Default Setting: "Accept trusted certificates only" should be on "No" instead of "Yes".
