## Release 2.19.6

### elmeg IP620 and elmeg IP630

---

## 1. What is new?

- SIP timers verification
- tftp can be used for provisioning
- Translations are updated
- Call Park & Retrieve

## 2. Enhancements

- Display improvement for Multiple lines support
- [FunctionKeys] BLF and Line key are signaling the status for setting "**Standard**"  
*This change introduces (if the standard setting has been selected for the BLF) the following color scheme:*
  - *idle > green*
  - *busy > red*
  - *error > yellow*
  - *ringing > red flashing*
- Display Call lists in web-interface
- SIP message can be deleted with empty SIP message
- Increase Standby Brightness of Display
- Brightness adjustment via MMI and Web-UI
- [Provisioning] If provisioning.xml is not present, MAC.xml is downloaded
- No WebUI access after network settings changed
- BLF - reduce network traffic, without losing subscriptions on server
- VRU 1.0 (failover/failback) - remove additional DNS query A
- Disconnect network cable during provisioning is stopping the provisioning process
- BLF - wrong status indication on second connection
- Ringtone handling via provisioning
- Firmware update is proceed, even if provisioning fails
- BLF - network traffic reduced
