Release Notes 3.17.4
elmeg IP640

1. What's new?

- In the **Settings > Debugging > Reboot** menu, you can configure an automatic reboot of the phone at a specific time.
- In the **Settings > Desk phone > Display > Night Mode** menu, the display and call signaling can be deactivated for certain times.
- Playback of the ringing tone can be deactivated (e.g. when using a headset) in the **Settings > Telephony > Call settings > Tone selection > Dial-tone** tone menu.
- If the keypad is locked by a PIN (the setup takes place in the **Settings > Telephony > Phone lock** menu), it can be unlocked by pressing and holding the **#aA** key and entering the PIN. Press and hold again to lock the keypad. The keypad is automatically unlocked for incoming calls, configured emergency numbers can be dialed without unlocking.
- Pressing a function key on the display for an extended time allows editing the key, pressing on a free area allows to set up a new key.

2. Enhancements

- SIP passwords are no longer stored in clear text on the phone.

3. Bugfixes

- At the beginning of a call, voice transmission was briefly interrupted.
- The phone sent DTML "outband", even if this was not accepted by the PBX.
- In a team call, the call signaling he call was not synchronous.
