Firmware elmeg System phone S530/S560

Files: elmegS560_V2.100_ngpbx.bin
elmegS530_V2.100_ngpbx.bin

List of corrected errors and changes from Version V2.000 to Version 2.100

No.	New functions and changes
01	Display and font improvements for S560 – devices: With new version 2.100 we'll introduced a proportional font and a new display design to create a modern and up to date appearance. Because of the changed design the S560-devices getting on more line to show more information simultaneously (there are six instead of five lines).
02	Support the ICT-PBX: The system phones (S560 and S530) are now downwards compatible to operate with older elmeg PBX systems (ICT). It is possible to configure the system phones by the elmeg Win Tools.
03	Support the main extension or other PBXs: MSNs are now programmable in the menu of S5x0-device. Furthermore some access codes (e.g. pre-selection code or country code) can be configured.
04	Expansion of firmware update mechanism: The service menu of S5x0-devices are extended with a menu item called "Software Update". A firmware update could be executed by input a valid number of a firmware update server (internal hybrid firmware update server, or external firmware update server).
05	Expanded functions for standard dial keys: Use the name of the dial key to show caller name if a connection is established with a number similar to the configured dial key. Support LED signaling for incoming calls and established connections. Key press leads to an automatic dialing with activated loudspeaker.
06	Improvements for 'Info'-menu
