bintec Secure IPSec Client Version 3.13 Build r40955: Improvements and Bug Fixes

1 New features and enchancements

- **Adaption to Windows 10 Version 1809 – Driver installation:**.
  Due to Microsoft internal changes it was not possible to install Windows 10 Version 1809 with previous clients.

2 Improvements / Bug Fixes

- **Request for the creation of a test connection despite existing VPN profile configuration:**
  If the client's test period was not started immediately after the installation, the dialog for creating a test connection appeared even though a VPN configuration was already installed by the client installation. This bug has been fixed.
- **Diagnostic data in the installation directory:**
  In the case of the activated full trace function or a configured hotspot detection, diagnostic files were incorrectly written to the installation directory of the client. This bug has been fixed.
- **Reloading DLLs:**
  Improved DLL loading to increase security against manipulated DLLs.
- **Fixed display problems in PreLogin with mobile profile**

3 Known limitations

- **Elimination of support for Windows Vista 32/64 bit**
  Due to the upgrade to Windows 10 version 1809, support for Windows Vista will be removed from this release.
